UNITED STATES.

	Page.
Further concerning hydrocyanic acid gas against household insects	2083
Summary of work in Chinatown for week ended November 21	2084
Transactions on account of yellow fever at Laredo and San Antonio, Tex.	2085
Report of inspection at Eagle Pass, Tex., October 31, November 7 and 14	2087
Statistical reports of States and cities of the United States—Yearly and monthly.	2088
Inspection of immigrants at Baltimore, Boston, and New York	2089
Table—	
Inspection of immigrants—Monthly	2090
Quarantine reports	2092
Smallpox in the United States	2098
Plague in the United States	2107
Yellow fever in the United States	2107
Weekly mortality of cities of the United States	2108

FOREIGN AND INSULAR.

China—	
Reports from Hongkong	2110
Reports from Shanghai—a case of cholera on the British bark <i>Olivebank</i> at Shanghai	2110
Cuba—	
Reports from Cienfuegos	2111
Reports from Matanzas	2111
Reports from Santiago	2112
Germany: Report from Berlin—mortuary statistics	2113
Hawaiian Islands: Reports from Hilo and Honolulu	2113
India: Report from Calcutta	2114
Japan—	
Cholera in Nagasaki	2115
Report from Yokohama	2115
Mexico—	
Report from Tampico	2115
Sanitary measures at Vera Cruz on account of yellow fever	2116
Philippine Islands—	
Reports from Manila—cholera in the provincial towns	2116
Plague and smallpox in Cebu during September, 1903	2119
Foreign and insular statistical reports of countries and cities—Yearly and monthly	2119
Cholera, yellow fever, plague, and smallpox tables	2121
Weekly mortality table, foreign and insular cities	2126

PUBLIC HEALTH REPORTS.

Further concerning hydrocyanic-acid gas against household insects.

Public Health Reports of November 13 contains a very practical and instructive article by Dr. L. O. Howard upon the employment of hydrocyanic-acid gas in destroying household insects. Apropos of this subject, an abstract from a paper read before the American Public Health Association by Dr. Fernando Lopez, of Mexico, will be of interest.

Doctor Lopez first draws attention to the relation of insects and animals to communicable diseases. He lays particular stress upon the rôle played by the mosquito in malaria, filariasis, and yellow fever and the carrying of bubonic plague infection by fleas. He mentions the possibility of typhoid or tubercle bacilli being carried by flies and other insects and the part played by rats and mice in spreading plague and other diseases.

After establishing the relation between insects and rodents and the communicable diseases, he emphasizes the value and necessity of disinfecting with an agent which will surely and rapidly destroy animal and insect life. His experiments, conducted at the military hospital of instruction, show that hydrocyanic acid gas in a closed room kills animals and insects quickly and surely if generated in proper volume and if cracks and crevices in the room are properly sealed. He states that for chinchies, fleas, lice, and cockroaches, no less than 20 grams of cyanide to the cubic meter should be used and the time of exposure should be at least six hours.

For rats and mice 15 grams to the cubic meter should be used, the exposure to last at least four hours. For mosquitoes 10 grams to the cubic meter should be used, the exposure lasting six hours. He says that 1 gram to the cubic meter, with an exposure of one hour, is sufficient to kill flies:

He agrees with Doctor Howard in the great care which should be exercised in handling this highly potent poison and that although the gas is not supposed to be inflammable, all lights should be extinguished. He commends the method of generating the gas as outlined by Doctor Howard (dropping the potassium cyanide contained in a paper bag into a basin of dilute acid), but suggests that tarlatan be used instead of paper

bags for containing the charge of potassium cyanide. This material permits the reaction to begin immediately, whereas the paper bag might cause some delay.

In a very large room where a large quantity of the cyanide must be used, he suggests the following method, which will generate the gas more slowly and obviate the danger from violent ebullition and heat production which may result where a large quantity of the salt is dropped at once into the acid.

"The process consists in placing the salt with a little water in a porcelain cask of sufficient capacity, and the sulphuric acid conveniently diluted in another cask which has a faucet. Place a porcelain or enameled iron vessel in the mouth of the first cask, holding it in place by wires, giving it a slight inclination, so that the liquid poured into it will run into the interior of the cask; place the cask containing the sulphuric acid upon the table so that the faucet will be in the air; place the second cask upon the floor so that the vessel attached to its mouth will be just beneath the faucet. Having prepared everything in this way and the time comes to verify the reaction, calmly turn the faucet so that the solution of sulphuric acid will fall on the small vessel and run into the cask containing the cyanide. It is easily understood that by using this artifice there will be plenty of time to escape from the action of the gas and to complete the operation with calmness and surety."

Doctor Lopez says further that the gas constitutes "an estimable agent for the disinfection of railroad cars, especially against the propagation of yellow fever." He also thinks the method particularly applicable for the destruction of animals and insects on board ships, because of the ease with which a ship can be isolated from other habitations.

[Reports to the Surgeon-General, Public Health and Marine-Hospital Service.]

Summary of work in Chinatown for the week ended November 21.

SAN FRANCISCO, Cal., November 23, 1903.

WYMAN, Washington:

Following is record of work in Chinatown for week ended November 21:

Buildings reinspected.....	175
Rooms	1,348
Persons inspected	1,627
Sick	31
Sick prescribed for at Oriental Dispensary.....	19
Dead examined	9
Necropsies	3
Rats examined bacteriologically.....	26
Number showing pest infection.....	0
Places limed and disinfected	877
Times streets swept.....	2
Sewers flushed	16

Notices served to abate plumbing nuisances.....	10
Plumbing nuisances abated.....	7
Undergoing abatement.....	18
Total number of plumbing inspections.....	119

BLUE.

Transactions on account of yellow fever at Laredo and San Antonio.

AUSTIN.

AUSTIN, TEX., November 21, 1903.

WYMAN, Washington:

On account of Richardson familiar with conditions in San Antonio, I would like to see him remain there for present if does not interfere with your plans.

GEO. R. TABOR,
State Health Officer.

HOUSTON.

HOUSTON, TEX., November 21, 1903.

WYMAN, Washington:

State and local quarantines against San Antonio raised. Detention camps around Houston discontinued. No restrictions upon traffic from there.

EBERSOLE.

LAREDO.

LAREDO, TEX., November 18, 1903.

WYMAN, Washington:

New cases, 10; old cases, 6; total reported to-day, 16; deaths, 2; 63 houses disinfected with 161 rooms; 420 containers, 160 excavations, 14 tanks, 7 wells, and 77 premises oiled; 146 premises inspected, 31 barrels of crude oil sprinkled on vacant lots and intervening streets, covering 66 city blocks. Maximum temperature 57°, minimum 42°. Cannel reports 1 new case, Minera reports no new cases, 1 death. Nuevo Laredo reports nothing new. Additional officers recommended in telegram of November 11 are not now necessary. Tabor sent for additional physicians who arrived here last Saturday. The volunteer inspection service is still in active operation and giving good results. The favorable change in the weather and the work being done make me hope the epidemic may soon be controlled.

GUITERAS.

LAREDO, TEX., November 19, 1903.

WYMAN, Washington:

New cases, 17; old cases, 2; total reported to-day, 19; deaths, 2; 98 houses disinfected, with 276 rooms; 538 containers, 9 premises, 85 excavations, 6 tanks, and 13 wells oiled; 156 premises inspected; 3 faucets put in barrels; 12,000 square feet of standing water oiled; 25 barrels crude oil sprinkled on vacant lots and intervening streets covering 73 city blocks. Maximum temperature, 52°; minimum, 33°. Cannel, Minera, and Nuevo Laredo report nothing new. Considerable opposition encountered in disinfection on account of cool weather.

GUITERAS.

LAREDO, TEX., *November 20, 1903.*WYMAN, *Washington:*

Cases reported to-day, 19, all new; deaths, none; 117 houses disinfected, with 278 rooms; 579 containers, 235 excavations, 16 wells, 7 tanks, and 21 premises oiled; 157 premises inspected; 13 barrels of crude oil sprinkled on vacant lots and intervening streets, covering 60 blocks. Maximum temperature, 56°; minimum, 36°. Cannel reports 1 new case; Nuevo Laredo, 2 cases. Minera reports nothing new. Through trains on Mexican National will resume to-morrow. It is hoped to have the International and Great Northern also resume their trains. Six frontier guards discharged to-day. Six more will be discharged in a day or two. Have retained guards at bridges and principal crossings in the neighborhood of Laredo and Minera. On account of cold weather prevailing I would recommend raising the quarantine against Mexico.

GUITERAS.

LAREDO, TEX., *November 21, 1903.*WYMAN, *Washington:*

Cases developed since last report, 10; deaths, 1; 102 houses disinfected, with 299 rooms; 873 containers, 305 excavations, 20 premises, 17 wells, and 5 tanks oiled; 285 barrels of crude oil sprinkled on vacant lots and intervening streets, covering 74 city blocks. Maximum temperature, 66°; minimum, 56°. Cannel reports 1 new case, and Minera 1. No report from New Laredo. Weather continues favorable, and the decline in the number of cases should continue. Goldberger arrived to-night.

GUITERAS.

LAREDO, TEX., *November 22, 1903.*WYMAN, *Washington:*

I regret to have to report the death of Surgeon Murray at 7.30 this morning.

GUITERAS.

LAREDO, TEX., *November 22, 1903.*WYMAN, *Washington:*

Cases reported to-day, 6; deaths, none; 50 houses disinfected, with 198 rooms; 286 containers, 114 excavations, 31 premises, and 6 wells oiled; 78 premises inspected; 15 barrels of crude oil sprinkled on vacant lots and intervening streets, covering 42 city blocks. Maximum temperature 77°, minimum 52°. New Laredo reports 1 death; no report from Cannel or Minera.

GUITERAS.

LAREDO, TEX., *November 23, 1903.*WYMAN, *Washington:*

Cases developed since last report, 4; deaths, 2; 52 houses disinfected, 237 rooms; 212 containers, 122 excavations, 6 premises, 1 well, and 2 tanks oiled. Fifty-eight premises inspected; 21 barrels of crude oil sprinkled on vacant lots and intervening streets, covering 44 city blocks. Maximum temperature, 82°; minimum, 50°. Minera reports 5 new cases. Cannel reports 1 new case for to-day and 1 for yesterday.

Nuevo Laredo reports nothing new. Through trains from Mexico City to St. Louis, Mo., commenced during yesterday. Do not stop. Monterey customs inspection of baggage will be done at New Laredo as in normal times. Passengers from Saltillo will be required to have certificate of 5 days from any infected focus. From points south of Saltillo, no certificates required. This is a great relief to railroad traffic. Tabor arrived to-night.

GUITERAS.

SAN ANTONIO.

SAN ANTONIO, TEX., *November 19, 1903.*

WYMAN, *Washington:*

No case, no death to-day. Temperature, 31° and 42°.

RICHARDSON.

SAN ANTONIO, TEX., *November 20, 1903.*

WYMAN, *Washington:*

One death and 1 case to-day in city hospital. Temperature, 42° and 52°.

RICHARDSON.

SAN ANTONIO, TEX., *November 21, 1903.*

WYMAN, *Washington:*

One case in city hospital in fifth day of disease; no death to-day. Temperatures 52° and 44°; found live anopheles and culex in suburbs to-day, but have seen no stegomyæ since freeze.

RICHARDSON.

SAN ANTONIO, TEX., *November 22, 1903.*

WYMAN, *Washington:*

One case; no death to-day. Case was in fourth day of disease, and living stegomyæ were found in house. Temperatures 50° and 69°.

RICHARDSON.

SAN ANTONIO, TEX., *November 23, 1903.*

WYMAN, *Washington:*

Five cases, 1 death to-day; cases all over 5 days old. Temperature, 50° and 70°.

RICHARDSON.

Report of inspection at Eagle Pass, Tex.

Acting Assistant Surgeon Hume reports as follows:

	Week ended.		
	Oct. 31.	Nov. 7.	Nov. 14.
Persons inspected	111	133	117
Persons held	3	1	1
Pullman cars fumigated	7	7	4

Statistical reports of States and cities of the United States—Yearly and monthly.

CONNECTICUT.—Reports to the State board of health for the month of October from 168 localities having an aggregate estimated population of 940,785, show a total of 1,123 deaths, including diphtheria 21, enteric fever 29, measles 3, scarlet fever 5, whooping cough 13, and 121 from tuberculosis.

IOWA—*Davenport*.—Month of October, 1903. Estimated population, 40,000. Total number of deaths 43, including diphtheria 1, and 6 from tuberculosis.

Keokuk.—Month of October, 1903. Estimated population, 16,000. Total number of deaths 12, including enteric fever 1, and 1 from tuberculosis.

MICHIGAN.—Reports to the State board of health, Lansing, for the week ended November 14, 1903, from 80 observers, indicate that phthisis pulmonalis, pleuritis, scarlet fever, inflammation of bowels, and whooping cough were more prevalent, and inflammation of kidney, measles, and cholera infantum were less prevalent than in the preceding week. Meningitis was reported at 1, whooping cough at 11, measles at 14, smallpox at 27, diphtheria at 44, scarlet fever at 59, enteric fever at 86, and phthisis pulmonalis at 183 places.

MINNESOTA—*Minneapolis*.—Month of October, 1903. Census population, 202,718. Total number of deaths 170, including diphtheria 6, enteric fever 7, scarlet fever 2, and 23 from tuberculosis.

MISSISSIPPI—*Natchez*.—Two weeks ended November 7, 1903. Estimated population 15,000. Total number of deaths 12, including 2 from tuberculosis.

NEBRASKA—*Omaha*.—Month of July, 1903. Census population, 102,555. Total number of deaths 84, including diphtheria, 2, enteric fever, 1, and 8 from tuberculosis.

Month of August, 1903, total number of deaths 80, including 11 from tuberculosis.

NEW HAMPSHIRE—*Concord*.—Month of September, 1903. Estimated population, 20,000. Total number of deaths, 26. No deaths from contagious diseases. Month of October, 1903. Total number of deaths 31, including diphtheria 1, and 2 from enteric fever.

NEW YORK—*Auburn*.—Month of October, 1903. Estimated population, 36,778. Total number of deaths 32, including diphtheria 4, enteric fever 1, and 4 from tuberculosis.

TENNESSEE—*Chattanooga*.—Month of October, 1903. Estimated population, 40,000—white, 27,000; colored, 13,000. Total number of deaths 21—white, 13; colored, 8, including enteric fever 1, and 3 from tuberculosis.

TEXAS—*San Antonio*.—Month of October, 1903. Estimated population, 65,000. Total number of deaths 137, including diphtheria 3, enteric fever 5, yellow fever 4, and 24 from tuberculosis.

UTAH—*Salt Lake City*.—Month of October, 1903. Estimated population, 75,000. Total number of deaths, 50, including enteric fever 6, and 1 from tuberculosis.

WASHINGTON—*Tacoma*.—Month of October, 1903. Estimated population, 60,000. Total number of deaths, 45, including enteric fever 3, and 3 from tuberculosis.

Report of immigration at Baltimore, Md.

FOREIGN AND INSULAR.

CHINA.

Reports from Hongkong.

Passed Assistant Surgeon McMullen reports October 15 and 19 as follows:

Week ended October 10, 1903—Twelve vessels, with 920 officers and crew and 847 passengers (170 cabin and 677 steerage) were inspected and granted bills of health. Five hundred and seventy-six crew and 646 steerage passengers were bathed and their baggage disinfected, 1,241 pieces.

The only communicable diseases reported for the week were two fatal cases of plague (Chinese), both of which occurred in the city. One alien per s.s. *Victoria*, with trachoma, was recommended for rejection.

Week ended October 17, 1903: Six vessels, with 617 crew and officers and 578 passengers (217 cabin and 361 steerage) were inspected and granted bills of health; 469 crew and 337 steerage were bathed and their baggage disinfected. One vessel to Manila via Amoy was directed to proceed via Marivelles for disinfection. There was 1 rejection for fever, and 18 aliens (Chinese steerage) were recommended for rejection on account of trachoma.

The following communicable diseases were reported for the week: Two cases and 2 deaths from plague and 1 case of enteric fever.

Reports from Shanghai.

Acting Assistant Surgeon Ransom reports October 13 and 19 as follows:

Week ended October 10, 1903, there were inspected 3 vessels, 152 crew (18 cabin and 1 steerage passenger). Three cases of illness on board ships bound to the United States were investigated. There were viséd 30,815 pieces of freight.

Communicable diseases were reported to the municipal health officer as follows: Cholera, 7 deaths; enteric fever, 3 cases, and diphtheria, 1 case. The total mortality reported was 7 foreigners and 189 natives.

Newchwang is the only outport reporting quarantinable disease present. During the week ended October 3 there occurred at that port 144 cases and 142 deaths from plague. Since the commencement of the present epidemic during the first week in September of this year there has been a total of 465 cases and 414 deaths from plague at Newchwang.

A case of cholera on the British bark Olivebank at Shanghai.

Acting Assistant Surgeon Ransom reports October 19, as follows: The British bark *Olivebank* sailed from this port yesterday, bound to Royal Roads, near Victoria, British Columbia, for orders. During her stay in Shanghai the *Olivebank* had on board one case of cholera that I know of, and I suggested to the agents, the Standard Oil Company, through her captain, the advisability of having her disinfected under the supervision of this office, in view of the possibility of her ultimate destination being an American port, but this suggestion was not acted upon. I would further state that it is believed that the vessel carried mud ballast from the Wangpoo River, which is considered by this office to be dangerous.

This information is forwarded in case the Bureau may desire to have the vessel disinfected should she go finally to an American port, and a copy of this letter will be sent to the United States quarantine officer at Port Townsend, Wash.

NOTE.—Doctor Montizambert, director-general of public health, Ottawa, Canada, was notified of this vessel, also the quarantine officer at Port Townsend, Wash.

CUBA.

Reports from Cienfuegos.

Acting Assistant Surgeon McMahon reports November 12 and 17 as follows: Week ended November 7, 1903. Bills of health were issued to 3 vessels going to ports in the United States, all in good sanitary condition and no sickness.

No quarantinable disease has arrived at this port on vessels during this week, nor has any been reported in the city.

The mortuary report has not been received yet, and will be forwarded as soon as received.

Week ended November 14, 1903. Bills of health were issued to 8 vessels going to ports in the United States, all in good sanitary condition and no sickness on board of any of them.

The mortuary report for the city for the first ten days of this month has just been received and shows there were 20 deaths, caused by, tuberculosis 3, malaria 1, meningitis 1, and other noninteresting causes.

There have been reported 2 cases of scarlet fever in the city this week, and the city authorities are taking every precaution to prevent its spread.

Reports from Matanzas.

Acting Assistant Surgeon Núñez reports November 11 and 16 as follows: Week ended November 7, 1903.

The case of scarlet fever in this city, mentioned in my previous report, was discharged cured on the 9th instant. Since then no other cases have been reported. One case of rōtheln, or German measles, occurred in this city last week, and the usual precautions are being taken to prevent its spread.

Three bills of health have been issued to vessels bound for United States ports during the past week.

No quarantinable disease has been reported.

Following are the mortuary statistics of this city during the period of ten days ended November 10, 1903.

	Number of deaths.	Bertillon number.
Gangrene, senile.....	1	142
Cardiac disease (not classified).....	1	79
Tuberculosis.....	2	27
Debility, congenital.....	1	151
Sarcoma, hepatic.....	1	40
Pleuro-pneumonia.....	1	93
Meningitis.....	1	61

Decrepitude.....	1	154
Enteritis.....	1	105
Congestion, pulmonary.....	1	95
Insufficiency, mitral.....	1	79
Arterio-sclerosis.....	1	81
Abscess, peritoneal.....	1	
Total.....	15	

Estimated population, 48,000; annual rate of mortality per 1,000, 11.40.

Week ending November 14, 1903: Three bills of health were issued during this period to vessels leaving for ports in the United States.

No quarantinable disease or any of contagious or infectious nature has been reported during the past week within this district.

Mortuary statistics for this city will be forwarded with my next report.

Reports from Santiago.

Acting Assistant Surgeon Wilson reports November 10 and 17 as follows:

Week ended November 7, 1903: Bills of health were issued to three vessels bound for the United States. No quarantinable disease has been reported. I inclose herein the weekly abstract of bills of health issued and the mortuary statistics for the week.

Mortuary statistics for the week ended November 7, 1903.

SANTIAGO DE CUBA.

Senility	1
Total	21

Annual rate of mortality for the week, 24 per 1,000. Estimated population, 45,500.

GERMANY.

Report from Berlin—Mortuary statistics.

Consul-General Mason reports November 6 as follows: The death rate of Berlin for the week ended October 24 was not much higher than in the preceding week and the corresponding week of last year; it amounted, calculated on the year, to 13.9 per thousand of the population. Among the large German cities only 5 could show more favorable figures than Berlin, namely, Dresden, Hanover, Crefeld, Charlottenburg (with 12.9), and Schöneberg with 7.4 per thousand. The death rate of Braunschweig was identical with the Berlin figure, while the following cities among others had a considerably higher rate than Berlin: Stuttgart, Carlsruhe, Bremen, Hamburg, Leipzig, Frankfurt-am-Main, Munich, Nuremberg, Cologne, Magdeburg, Breslau, and Königsberg, as well as London, Paris, and Vienna. There was again a decline in the number of deaths among children in the first year of life, the increase in the number of deaths being exclusively confined to the higher-age classes. The mortality rate among infants amounted to 3.6 per year and thousand, being less than half the rate of Munich, Nuremberg, Bremen, and Breslau. The registered number of cases of acute disease of the respiratory organs also showed a decline, causing during this week 29 deaths. There was no variation with regard to acute intestinal diseases, which claimed 62 victims; 11 children succumbed to cholera, 76 persons died of phthisis pulmonalis, and cancer claimed 44 victims. Further, there were registered 4 deaths from scarlet fever, 6 deaths from diphtheria, and 2 deaths from measles; 2 persons died of typhus, and influenza claimed 4 victims. Finally, 7 persons died by violence.

HAWAIIAN ISLANDS.

Reports from Hilo and Honolulu.

Chief Quarantine Officer Cofer reports November 6 and 9 as follows: Outgoing quarantine transactions at Hilo for the week ended October

31, 1903: Number of vessels disinfected, then inspected and passed, 1; number of cabin passengers inspected and passed 17; number of crew inspected and passed, 19; number of pieces of baggage disinfected, 48.

Out-going quarantine transactions at Honolulu for the week ended November 7, 1903.

Vessels inspected and bills of health issued.....	8
Vessels disinfected.....	3
Cabin passengers inspected.....	107
Steerage passengers inspected.....	157
Crew inspected.....	111
Pieces of steerage passengers' baggage disinfected and passed.....	178
Pieces of crews' baggage disinfected and passed.....	27
Hides and skins disinfected.....	0
Pieces of freight disinfected.....	515

Monthly report of quarantine transactions in the Hawaiian Islands for the month of October, 1903.

PORT OF HONOLULU.

PORT OF KOLOA, KAUAI. No transactions.

INDIA.

Report from Calcutta.

Passed Assistant Surgeon Sprague reports October 28 as follows:

Week ended October 24, 1903, bills of health were issued to the following vessels: October 20, steamship *Monica*; total crew, 53; lascars, 35; no passengers. October 21, steamship *Venus*; total crew, 59; lascars, 51; no passengers. The clothing and effects of the 86 lascars were disinfected. There was one rejection from each crew because of a temperature above 99° F. * * * There were three rejections.

JAPAN.

Cholera in Nagasaki.

Sanitary Inspector Bowie reports October 26 as follows: A sudden outbreak of cholera occurred in this city on Thursday last, numbering 20 cases. In the three days that have since elapsed, the number has been increased to 49, with 27 deaths. The disease is not confined to any one part of the town, but is rapidly spreading throughout the different quarters. So far as I am able to learn, the first cases were thought to have been caused by eating small, sardine-like fish, called by the Japanese "iwashi," a very favorite dish among the natives, especially when dried. Thus far the disease has not found any victims among the foreign residents or visitors.

Report from Yokohama.

Assistant Surgeon Dunlap Moore reports October 26 as follows: Week ended October 17, 1903. The official "report of contagious diseases" for the above period, just received, includes the following: Enteric fever, 5 cases, 3 deaths; diphtheria, 3 cases, no deaths; plague (doubtful), 2 cases, 1 death; dysentery, 3 cases, 1 death. The case of cholera noted in the report for the week ended October 10 has since been determined not to have been true cholera. Press reports state that a case of cholera occurred in this city on October 21.

According to the same authority, a number of new cases of pest were discovered in Yokohama during the week ended October 24. Authoritative statistics show that from May 10 to October 17, 1903, there have been officially reported in Yokohama 29 cases of plague, with 23 deaths, and 3 cases of "doubtful plague," with 2 deaths.

According to press reports 8 doubtful cases of cholera occurred in the city of Nagasaki on the 21st instant. The same authority states that 3 doubtful cases of the same disease occurred in Kami-Nagasaki-Mura (a village near Nagasaki) on the above date.

MEXICO.

Report from Tampico.

Temporary Acting Assistant Surgeon Lippincott reports as follows: Week ended November 7, 1903: Bills of health issued, 5; vessels inspected and passed, 4; vessels disinfected and passed, 1; personnel of crew, 211; passengers, 4; baggage, 7 pieces.

There were 2 new cases of yellow fever officially reported during the week, and 1 remaining from the previous week, making a total of 3 cases for the week ended November 7, 1903. Fifteen deaths were recorded, of which 1 was from pernicious fever and 14 from noncontagious causes.

The situation has improved more than could be expected in the last fifteen days, which is probably due to the cool temperature. One fireman and a steward were removed from steamship *Saratoga*, on inspection, with temperatures 38.5° and 39°, respectively, have proved bad cases of malarial fever, and are still under treatment at the city hospital.

Ciudad Victoria, Linares, Monterey, and the Huasteca remain badly infected.

Sanitary measures at Vera Cruz on account of yellow fever.

Consul Canada reports, November 2, as follows: The "superior board of health" of Mexico, through the secretary of the treasury, has asked for an appropriation of \$100,000 for the purpose of inaugurating a vigorous campaign against yellow fever throughout the Republic, and upon the recommendation of the President the matter was laid before Congress.

An outline of the work to be accomplished has been kindly furnished us by Drs. N. del Rio and Manuel Yglesias, quarantine physicians at this port, and doubtless these same measures will be employed at all points within the limits of this country wherever yellow fever is prevalent or likely to be.

On September 1, the city of Vera Cruz was divided into four districts, each one under the control of a medical officer and an inspector. The working force consists of 6 inspectors of the first class, 14 of the second, together with 30 assistants; this force may be increased if deemed advisable.

A system of domiciliary visits is in contemplation and all affected persons will be removed at once either to one of the hospitals or to a sanitarium recently established for the purpose. All patients to be isolated while under medical treatment.

The doors and windows of the hospitals and sanitarium are provided with wire netting; there are double doors arranged so that the second one can not be opened until the first has been closed.

Rooms in private houses screened in accordance with these regulations, and to the satisfaction of the inspecting officer, will be considered as properly isolated quarters for a patient, and the person will not be removed.

The inspectors will examine all receptacles containing water and destroy all larvæ of mosquitoes encountered; petroleum will be used; the owner or tenant to be required to cover all such vessels in or about the building.

Stringent rules will be adopted and enforced to insure absolute cleanliness in and about the houses, yards, corridors, and passageways; and upon completion of the city drainage works, every house owner will be compelled to connect all privies and water-closets with the sewers, and also to fill up all cesspools and other excavations used for the reception of waste matter.

The inspectors are also required to exercise supervision over all matters affecting the public health, as also the cleaning of the public thoroughfares, now done under the supervision of the police department.

PHILIPPINE ISLANDS.

Reports from Manila—Cholera in the provincial towns.

Chief Quarantine Officer Heiser reports October 9 and 17 as follows:

The number of quarantinable diseases reported in Manila during the week ended October 3, 1903, is as follows:

	Cases.	Deaths.
Cholera	52	49
Smallpox	1	0
Plague	0	0

Since my detailed report of September 16, 1903, in which the sharp increase in the number of cholera cases was ascribed to an infected spring, there has been a gradual decline in the number of cases, which is no doubt due to the fact that the spring was closed. The number of cases has been reduced from 79 per week to 52 per week.

Cholera is again present on the watershed from which the water supply of Manila is obtained. As long as this menace exists, Manila is likely to be visited almost any day by a frightful cholera epidemic.

There has been a great improvement in the cholera situation at Iloilo. At Cebu there was no cholera reported during the week.

Since the beginning of the present outbreak of plague at Cebu, (August 19, 1903), there have been 16 cases and 13 deaths reported. When it is considered that the history of plague in the islands shows that at this season of the year plague is always at its lowest ebb, and in this period at least 16 cases have occurred, there is considerable cause for alarm, especially when it is considered that no assistance to stamp it out is being rendered by the people of Cebu. The board of health is considering the advisability of quarantining against that port.

Later investigation shows that plague was present in Cebu last autumn, and that it is not improbable that other cases have occurred since then. This still further strengthens the opinion that it was not introduced from the outside by shipping.

Report of cholera occurring in provincial towns in the Philippine Islands.

WEEK ENDED OCTOBER 3, 1903.

The number of quarantinable diseases reported in Manila during the week ended October 10, 1903, was as follows:

	Cases.	Deaths.
Cholera	38	35
Smallpox	0	0
Plague	0	0

There has been a steady improvement in health conditions during the week. This is the first time since last year that there has been an entire absence of plague and smallpox in Manila. The number of cholera cases in Manila has also been much reduced. At Cebu no cholera was reported, and at Iloilo there has been a great reduction in the number of cases.

During the week there has been a great influx of Chinese from Amoy. The surgeon, Doctor Johnson, who is attached to the consulate at Amoy, reports that there is no plague or cholera at that port, and has certified the passengers as safe; in consequence there has been no quarantine detention. All vessels from Hongkong or Amoy, unless disinfected at the port of starting, are required to call at Mariveles for disinfection of the vessel, crew, and passengers. A careful examination is made of the glandular regions, after which the vessel proceeds to Manila, where the passengers are again inspected before they land.

The port of Mariveles is now used as a coaling station by the Quartermaster's Department for coaling the inter-island transports. About 300 stevedores are employed in this work, and since cholera has broken out several times among the men it has been a serious problem to keep the vessels from becoming infected. With the view of reducing the danger as much as possible negotiations were entered into with the army. An isolated camp for these men was suggested. The suggestion was adopted, and a camp is now in course of construction by the army. This increased amount of shipping at Mariveles has almost doubled the work of the service at that port.

Plague, cholera, and smallpox, in Cebu, during September, 1903.

Assistant Surgeon Fox reports October 1, through the chief quarantine officer, as follows:

Quarantinable diseases reported to the local authorities for the month of September, 1903.

	Cases.	Deaths.
Plague	11	8
Cholera	4	2
Smallpox	5	1

Foreign and insular statistical reports of countries and cities—Yearly and monthly.

AUSTRALIA—*New South Wales*—*Sidney and suburbs*.—Month of September, 1903. Population, 508,510. Total number of deaths, 456, including diphtheria, 7; enteric fever, 1; scarlet fever, 2; whooping cough, 5, and 46 from tuberculosis.

Three months ended September 30, 1903. Total number of deaths, 1,476, including 225 from contagious diseases.

AUSTRIA—*Brunn*.—Month of September, 1903. Estimated population, 95,342. Total number of deaths, 210, including diphtheria, 2; enteric fever, 2; scarlet fever, 3; whooping cough, 1, and 46 from tuberculosis.

CANADA—*British Columbia*.—Vancouver, month of October, 1903, estimated population, 29,000; no deaths reported.

Victoria, month of October, 1903, estimated population, 21,000. Total number of deaths, 16, including 1 from enteric fever.

CHILE—*Antofagasta*.—Month of September, 1903, estimated population, 16,000. Total number of deaths, 71, including smallpox, 23, and 4 from tuberculosis.

FRANCE—*Marseille*.—Month of October, 1903. Population, 491,161. Total number of deaths, 823, including diphtheria 4, enteric fever 18, measles 1, scarlet fever 1, smallpox 21, whooping cough 3, and 77 from tuberculosis.

GERMANY—*Baden*.—*Freiburg*.—Three months ended September 30, 1903. Estimated population, 90,106. Total number of deaths, 460, including diphtheria 1, scarlet fever 1, whooping cough 21, and 58 from tuberculosis.

GREAT BRITAIN—*England and Wales*.—The deaths registered in 76 great towns in England and Wales during the week ended November 7, 1903, correspond to an annual rate of 16.2 per 1,000 of the aggregate population, which is estimated at 15,075,011.

London.—One thousand four hundred and twenty-six deaths were registered during the week, including measles 15, scarlet fever 13, diphtheria 18, whooping cough 11, enteric fever 18, and diarrhea 53. The deaths from all causes correspond to an annual rate of 16.1 per 1,000. In Greater London 1,884 deaths were registered. In the "outer ring" the deaths included 2 from diphtheria, 4 from scarlet fever, and 1 from whooping cough.

Ireland.—The average annual death rate represented by the deaths registered during the week ended November 7, 1903, in the 21 principal town districts of Ireland was 18.7 per 1,000 of the population, which is estimated at 1,093,289. The lowest rate was recorded in Ballymena and Sligo, viz, 0, and the highest in Kilkenny, viz, 49.1 per 1,000. In Dublin and suburbs 166 deaths were registered, including enteric fever 1 and 36 from tuberculosis.

Scotland.—The deaths registered in 8 principal towns during the week ended November 7, 1903, correspond to an annual rate of 15.8 per 1,000 of the population, which is estimated at 1,702,912. The lowest rate of mortality was recorded in Dundee and Greenock, viz, 12.8, and the highest in Perth, viz, 23.2 per 1,000. The aggregate number of deaths registered from all causes was 516, including diphtheria 6, measles 19, scarlet fever 5, and 6 from whooping cough.

HAWAIIAN ISLANDS—*Honolulu*.—Month of October, 1903. Census population, 39,306. Total number of deaths, 50, including 5 from tuberculosis.

JAMAICA.—Two weeks ended October 31, 1903. Estimated population, 755,730. Number of deaths not reported. One death from enteric fever and 1 from whooping cough reported.

Kingston.—Month of October, 1903. Estimated population, 52,475. Total number of deaths, 149, including enteric fever, 3; whooping cough, 5, and 14 from tuberculosis.

JAPAN—Nagasaki.—Ten days ended October 20, 1903. Population, 148,883. Number of deaths not reported. Two deaths from diphtheria and 2 from enteric fever reported.

St. HELENA.—Four weeks ended October 24, 1903. Estimated population, 4,000. Total number of deaths, 2. No deaths from contagious diseases.

Cholera, yellow fever, plague, and smallpox, June 27, 1903, to November 27, 1903.

[Reports received by the Surgeon-General, Public Health and Marine-Hospital Service, from United States consuls through the Department of State and from other sources.]

[For reports received from December 27, 1902, to June 26, 1903, see PUBLIC HEALTH REPORTS for June 26, 1903.]
